RALA CERTIFICATION is a procedure for the evaluation and approval of the business management system of companies engaged in construction. A RALA Certificate is an indication that the business management system meet the criteria established for the certification procedure and that the company complies with its in-house guidelines in this respect.

The certification criteria identifies the key procedures critical to the company's success as well as the requirements and expectations imposed by the customer on the operations of the construction party. Additionally, the certification criteria include requirements related to key safety and environmental considerations.
